Series features two putterhead styles that boast rear weighting and oversized head technology. The back weight resists twisting for a true stroke, while the T-line design promotes proper alignment.

Q-Roll Golf is offering its patented Radius Face Technology in two oversized models. Radius Face putters are designed to strike the ball above the equator, producing immediate topspin for a true and accurate roll to the hole. The Celebration Series Wave and Monarch putters are 100-percent CNC-milled from 6061 aluminum and feature special alignment waves or directional bars for improved alignment. They're offered in five unique colors.

To set your putting game on fire, the **Mars Line Of Fire** putters could be the perfect ignition. The putters are precision cast from high-grade 431 stainless steel and feature milled polymer faces that promote soft feel and true roll. Extreme perimeter weighting produces a high MOI. The Firestorm, Ring of Fire and Fireball models are face-balanced through a combination of the head shape and

curved steel shaft. The Hellfire is a heavier weighted putter for those who need help grooving their stroke. Each putter includes Mars' Flame Alignment System.

Carbite's HCG (High Center of Gravity) putter is rooted in the well-known ZG model that launched Carbite's Polar-Balanced success 13 years ago. The HCG's stainless-steel construction, with heel and toe weight distribution, has a mass of weight on the centerline above the perimeter of the ball and toward the back of the clubhead for true roll. A polymer face insert provides the soft feel preferred by many players.

Dunlop added a large, open-cut, mallet-style putter to its increasingly popular LoCo family of products. The LoCo Crazy Straight Putter is 100-percent CNC-milled from a solid block of aerospace-grade aluminum. Precision face-balanced weighting combined with the oversized shape supplies a soft touch and feel.

Hippo Golf's NG (New Generation) putters boast polymer face
